C:\WINDOWS\system32>docker

Usage: docker [OPTIONS] COMMAND

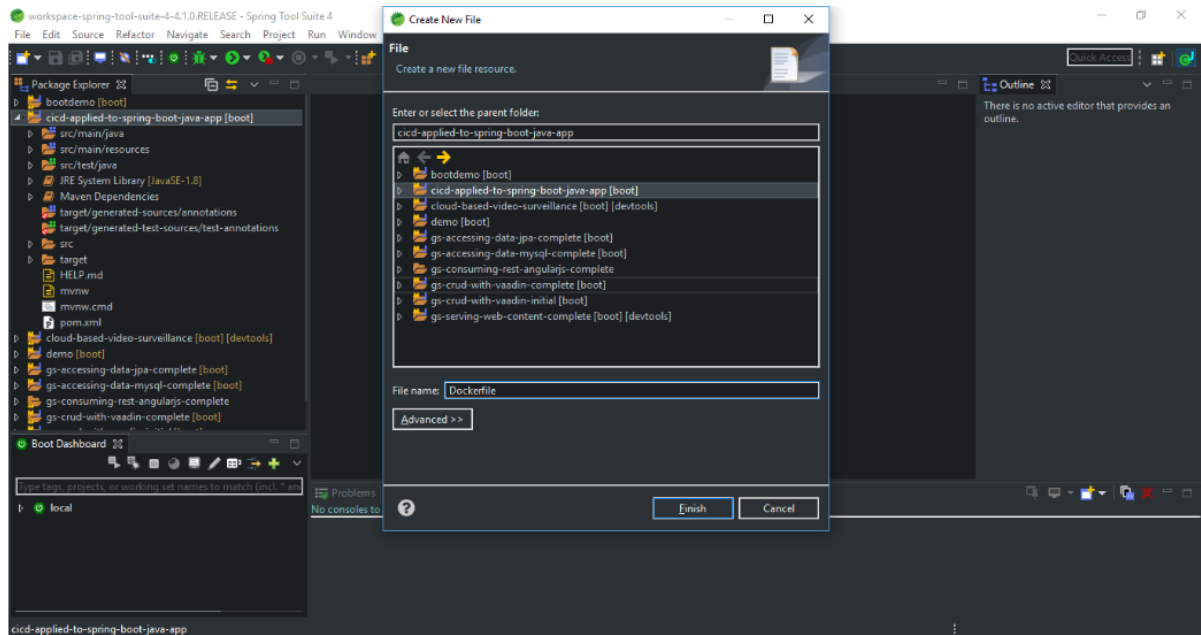

A self-sufficient runtime for containers

Options:
  --config string      Location of client config files (default
                        "C:\Users\Admin\docker")
  -D, --debug           Enable debug mode
  -H, --host list       Daemon socket(s) to connect to
  -l, --log-level string Set the logging level
                        ("debug"|"info"|"warn"|"error"|"fatal")
                        (default "info")
  --tls                Use TLS; implied by --tlscacert or --tlskey
  --tlscacert string    Trust certs signed only by this CA (default
                        "C:\Users\Admin\docker\ca.pem")
  --tlscert string      Path to TLS certificate file (default
                        "C:\Users\Admin\docker\cert.pem")
  --tlskey string       Path to TLS key file (default
                        "C:\Users\Admin\docker\key.pem")
  --tlsversion string   Use TLS and verify the remote
  -v, --version         Print version information and quit

Management Commands:
  builder      Manage builds
  config       Manage Docker configs
  container    Manage containers
  image        Manage images
  network      Manage networks
  node         Manage Swarm nodes
  plugin       Manage plugins
  secret       Manage Docker secrets
  service      Manage services
  stack        Manage Docker stacks
  swarm       Manage Swarm
  system       Manage Docker
  trust        Manage trust on Docker images
  volume       Manage volumes

Commands:
  attach       Attach local standard input, output, and error streams to a running container
  build        Build an image from a Dockerfile
  commit       Create a new image from a container's changes
  cp           Copy files/folders between a container and the local filesystem
  create       Create a new container
  deploy       Deploy a new stack or update an existing stack
  diff         Inspect changes to files or directories on a container's filesystem
  events       Get real time events from the server
  exec         Run a command in a running container
  export       Export a container's filesystem as a tar archive
  history      Show the history of an image
  images       List images
  import       Import the contents from a tarball to create a filesystem image
  info         Display system-wide information

```

Environment Variables

Customize your build using environment variables. For secure tips on generating private keys [read our documentation](#)

DOCKER\_PASSWORD

Available to all branches

DOCKER\_USERNAME

Available to all branches

If your secret variable has special characters like `&`, escape them by adding `\` in front of each special character. For example, `ma&w!doc` would be entered as `ma\&w!\doc`.
